Tools:	VS code Git Figma Netlify Vercel Surge

PROJECTS

• Summer Camp School [Live site](#) | [Github](#) > [Client](#) | [Server](#)

This is a simple summer camp website based on art and craft.

- It's also a full stack application. There are 3 types of users in this website called admin, teacher, student.
- By default, a user will be student. After logged in Admin can change their role to teacher or admin.
- Admin can handle the entire environment; teacher can create classes that will be approved by admin and student select any class and pay. Payment implemented with stripe.

Technologies: Tailwind, react, firebase, stripe, vercel, Express, mongodb , jwt ,framer motion , AOS

• Chef Recipe [Live site](#) | [Github](#) > [Client](#) | [Server](#)

This is a Chef Recipe application.

- Here I used authentication system. To visit this site properly you need to be logged in.
- There is all chef section. Here you will be able to see each chef details that how many recipes are available and the ingredients etc.

Technologies: React router dom, express, tailwind, firebase authentication, vercel.

• Toy World [Live site](#) | [Github](#) > [Client](#) | [Server](#)

This application is for kids.

- Here I used authentication system. To visit this site properly you need to be logged in. You will be able to see different types of toys in home page and see the details
- User can add toys and see there added products. There is search functionality where you can search products. There is some private route if you want to access those you need to login first. User can see their product after login.

Technologies: React-router-dom, firebase authentication, express, tailwind, mongodb, vercel, react AOS.
